

PREMIUM ORGANIC FERTILIZER®

Application Manual

Landscapers

Asase Gyefo Premium Organic Fertilizer is a nutrient-rich and PPRSD-certified product. It is suitable for all types of plants and crops, from food to flowers. One bag of Asase Gyefo contains 30 kg of organic fertilizer. It can be applied in agriculture, landscaping and horticulture.

How to apply Asase Gyefo for landscapers

When using Asase Gyefo, make sure you always mix it with soil, coco peat, or another substrate (like sawdust). You don't need to apply additional nutrients, it contains all macro and micronutrients needed for plants' growth.

For trees and shrubs planting in the ground: Uniformly mix Asase Gyefo with the excavated soil of the planting hole at a rate of 1:4 units of Asase Gyefo and soil respectively. Backfill and firm the soil/organic fertilizer blend around the root ball within the planting hole and water thoroughly after planting.

For trees and shrub maintenance/ mulching:

Incorporate 3cm of Asase Gyefo into the top 10cm of the soil. Use a higher rate for upgrading marginal soils.

For flowers in potted plants (horticulture)

You need to prepare the mixture of Asase Gyefo and substrate, 7-14 days before planting your flowers, and water it a few times.
